Ariel Gianatiempo

Senior Front-End Engineer | Performance & Front-End Architecture

Málaga, Spain | EU citizen | Open to fully remote roles across Europe | +34 665 861 221

gianatiempo@gmail.com | linkedin.com/in/gianatiempo | github.com/gianatiempo | arielgianatiempo.com

PROFILE

Front-end engineer with 19 years in software: 8 on the server in Java, then 11 in the browser (the last 8 in React) across banking, cybersecurity and healthcare. Owns architecture end to end — large-scale migrations, MVP rewrites and team-wide engineering standards, including a migration that delivered a 60% performance gain and a refactor that cut bugs by 90%. Currently building a full product rewrite proposed, negotiated and architected from the ground up, with AI-assisted development. Technical lead, mentor and hands-on contributor in distributed Agile teams.

CORE SKILLS

Frontend: React, TypeScript, JavaScript (ES6+), HTML5, CSS3, Responsive Design.

Architecture & State: Hexagonal Architecture, REST APIs, Redux, Zustand, TanStack Query, Apollo GraphQL, JSON, XML, SQL.

AI & Tooling: AI-assisted development (Claude Code), prompt engineering, Python, Figma.

UI Libraries: Ant Design, Material UI, Styled Components, Tailwind CSS.

Testing & Tooling: Jest, Vitest, React Testing Library, Playwright, Cypress, MSW, Vite, Webpack, ESLint, Prettier, Git.

Ways of working: Technical leadership, mentoring, code standards, code review, Agile/Scrum, Jira, Confluence.

Languages: Spanish (native), English (C2 Proficient), Italian (proficient).

PROFESSIONAL EXPERIENCE

Senior Front-End Developer — Plexus Tech

Jul 2025 – Present | Remote (Spain)

- Maintain and evolve four core areas of Openbank's homebanking platform — accounts, deposits, contracting and customer profile — as part of the wider Santander Group engineering effort.
- Upgraded the team's ESLint setup from v8 to v10 and extended the internal ESLint plugin with new standard and custom rules, raising code quality consistently across all four projects.
- Identified component duplication across the four codebases and proposed a shared component library; the proposal was adopted immediately and aligned with an existing company initiative.
- Deliver continuous accessibility (a11y) fixes, technical debt refactoring and new features within a Hexagonal Architecture codebase, using AI-assisted development tooling in daily delivery.

  Stack: React, TypeScript, Styled Components, Hexagonal Architecture, React Router, React Testing Library, ESLint, Jira, Confluence, AI-assisted development

Senior Front-End Consultant — V3 Cybersecurity

Apr 2023 – Present | Remote (part-time)

- Rewrote the company MVP on joining, migrating to Ant Design and a modernised dependency stack, delivering a 60% performance improvement plus significant reductions in build and development time.
- Built the case for a full frontend and backend rewrite after years of feature growth left the product inconsistent and constrained by its original backend; secured approval following months of negotiation, with backing from engineering leadership.
- Defined the application layout, screen structure and product philosophy, then directed a hired designer in producing Figma prototypes for every page, section and feature.
- Architected the new frontend so each UI section is independent and backed by its own endpoint where possible, prioritising reusability across areas, and specified the data contracts now being implemented by the Ruby on Rails backend team.
- Building the new frontend from scratch as sole developer, using AI-assisted development to sustain full-application scope single-handedly; targeting launch by end of 2026.

  Stack: React, TypeScript, Vite, Ant Design, TanStack Query, React Testing Library, Vitest, Zustand, MSW, API contract specification, Figma, Jira, Confluence, AI-assisted development

Senior Front-End Developer — System One

Jul 2022 – Feb 2024 | Remote

- Stabilised the Material UI integration by upgrading from early beta to stable release, resolving long-standing bugs at their root cause.
- Overhauled two core application areas, reducing reported bugs by 90% within two weeks of release and reaching full stability in both.
- Built a standalone Playwright, Cucumber and TypeScript testing project from scratch, enabling the QA team to write and maintain automated regression tests without relying on engineering support.

  Stack: React, JavaScript, Redux, Redux-Thunk, React Query, Material UI, Playwright, Webpack, React Testing Library, Cypress

Senior Front-End Developer — Austin Software (now Howdy)

Dec 2021 – Jun 2022 | Remote

- Defined and rolled out coding standards across an entire monorepo using ESLint and Prettier, then updated the codebase to comply.
- Introduced TypeScript to the front-end application, authored the type definitions for the migration and trained the team on the new tooling.
- Integrated GraphQL and REST services across the pharmacy platform, working closely with backend teams to align data contracts and keep both sides of the API in sync.

  Stack: React, TypeScript, Apollo GraphQL, Axios, Material UI, React Testing Library, ESLint, Prettier, Jira, Confluence

Senior Associate / Technical Lead — J.P. Morgan Chase

Nov 2019 – Nov 2021 | Buenos Aires, Argentina

- Designed a user claims tracking system, cut local build time by 50% through tooling improvements, and refactored the state management architecture to remove duplication and technical debt.
- Led a team of three (later six) React developers through a Flex-to-React migration, eliminating every deprecated component within eight months.
- Contributed to Project Bloom, a confidential-at-the-time greenfield fintech platform for private markets — matching start-ups with institutional investors and enabling secondary trading of pre-IPO shares — proposing architectural improvements, establishing linting rules and coding standards, and refactoring the full test suite.
- Served as technical lead and mentor for a six-developer internship programme, guiding it from analysis through to production release; also evaluated candidate coding exercises for hiring and ran an internal React best-practices Ignite group.

  Stack: React, TypeScript, JavaScript, React Query, Redux, Apollo GraphQL, Material UI, Vite, MSW, React Testing Library

Web UI Developer — Globant

Sep 2018 – Oct 2019 | Buenos Aires, Argentina

- Led one of six 5-developer teams in a company-wide internal initiative (30+ engineers) to prototype a CV and client-placement management tool; introduced Ant Design as the UI framework, later adopted by a competing team.
- Championed team-wide best practices and coding standards across the project, helping to raise overall code quality and contributing to the team's efficiency.
- Contracted out to J.P. Morgan as an external resource, where the quality of the work and the contributions made were recognised directly with an offer of a permanent position.

  Stack: React, JavaScript, Redux, Axios, Material UI, Git, Jira, Confluence

Front-End Developer — Tecnosoftware

Mar 2018 – Aug 2018 | Buenos Aires, Argentina

- Executed a strategic code refactoring initiative on an AngularJS application, optimising the existing codebase specifically to prepare it for a planned migration to a new front-end stack.
- Actively participated in creating mockups and proposing design enhancements, working to align new screens with the company's established design system and improve overall user experience.
- Balanced ongoing feature delivery and defect fixes on a live production application with the longer-term refactoring work needed to get the codebase ready for its next stack.

  Stack: AngularJS, JavaScript, HTML, CSS, Git, REST API, Agile Methodologies

Front-End Developer — Buffa Sistemas

May 2016 – Feb 2018 | Buenos Aires, Argentina

- Maintained and extended a suite of custom jQuery plugins used across multiple client projects, fixing bugs and ensuring consistent behaviour as browser and library versions changed.
- Collaborated closely with UX/UI teams to design and build interfaces and landing pages for a wide range of client purposes, turning visual designs into working front-end code.
- Trained new team members in the company's custom plugin library and front-end conventions, helping them get productive quickly on unfamiliar in-house tooling and workflows.

  Stack: jQuery, AngularJS, JavaScript, HTML5, Sass, Jira, Git, Grunt

Web Developer — Redbee

Mar 2015 – Apr 2016 | Buenos Aires, Argentina

- Built and integrated new API endpoints on the back end, contributing directly to the expansion and enhancement of the platform's overall functionality for end users.
- Developed front-end components and services alongside the API work, gaining early full-stack experience by integrating front-end and back-end pieces into one cohesive user experience.
- Collaborated with cross-functional teams to translate project requirements into technical solutions, taking part in code reviews and hands-on collaborative problem-solving throughout delivery.

  Stack: jQuery, AngularJS, JavaScript, HTML5, Sass, Jira, JSON, Groovy

Java Developer (Jr to Sr) — Hewlett-Packard, FDV Solutions, GetSense, Cubika, Teracode

May 2007 – Feb 2015 | Buenos Aires, Argentina

- Progressed from Junior to Senior Java Developer across five companies — Teracode, Cubika, GetSense, FDV Solutions and Hewlett-Packard — maintaining and extending web applications for telco, airline and enterprise clients over nearly eight years.
- Migrated a desktop Java Swing application to a full Java web application at GetSense, and maintained and delivered new features for Hewlett-Packard's work on American Airlines' loyalty and marketing platform.
- Worked from middleware analysis at Cubika through to ongoing maintenance and new feature development for multiple concurrent client projects at FDV Solutions and Teracode, building on Java, Spring, Hibernate and MySQL throughout.

  Stack: Java, Spring, Hibernate, Wicket, MySQL, XML

SELECTED PROJECTS

Personal Portfolio — arielgianatiempo.com

- Built a fully responsive static site with Astro, prioritising load performance and SEO.
- Developed the interactive timeline and light/dark theme toggle as React islands, minimising shipped JavaScript.
- Deployed on Netlify with continuous integration from the repository.

EDUCATION & CERTIFICATIONS

Information Systems Engineering (not completed) | Universidad Tecnológica Nacional | 1997 – 2001

Full Stack Development with Integrated AI | OpenWebinars | 2026

Generative AI Agents | OpenWebinars | 2026

Claude Platform 101 & Claude Code 101 | Anthropic | 2026 (IDs qr4qcgake3r7, 2j3zkkwxhzr3)

Python for Data Science, AI & Development | IBM | 2024 (ID 27LMMTYUYAEW)

AWS Certified Cloud Practitioner (CLF-C02) exam prep | LinkedIn | 2026

EF SET English Certificate (C2 Proficient) | EF SET | 2024
